Surviving the Singularity — Project Status

Date: June 12, 2026

Author: Christopher Tavalazzi (The Coffee Jesus)

Live site: survivingthesingularity.com

What This Is

Surviving the Singularity is a book-in-progress and companion website. The premise: a practical, satirical field manual for people who want to stay agentic as AI rewrites work, money, medicine, and meaning. Tone is conversational and darkly funny — think Kurzweil meets Anthony Bourdain.

The site is open draft. Everything is free to read. No login. No paywall. The book ships when it ships.

Platform Status

The SvelteKit site is live and functional with the following routes:

Route	Status
/	Live — landing page, thesis, calculator, chapter index
/why	Live — AGI timeline, expert voices, benchmarks
/book	Live — open draft, chapter previews
/blueprint	Live — 8-chapter shouse/independence blueprint
/blog	Live — dispatches
/about	Live
/checklist	Live — email-gated content
/agi	Live — redirects
/shouse	Live — 3D Shouse Builder strategy game
/preorder	Not built — planned (Phase 2)

The tech stack is solid: SvelteKit v2, Tailwind CSS, Supabase for email capture, Cloudflare Pages deployment. A free sample PDF (`StS-free-sample.pdf`) exists in static assets.

Recent site work (2026): Interactive diagrams added to landing, mobile layout overhaul, email capture + checklist gate, buy CTA wired to `PURCHASE_URL` env var (renders when set), launch script ready.

Book Content Status

The manuscript exists in two states inside the repo:

book-draft-v2 — Original Draft

Full manuscript, ~41,900 words across 19 files. All 12 chapters exist plus front matter (acknowledgements, introduction, TOC) and back matter (epilogue, glossary, further reading, index).

Chapter	Title	Words
Intro	Welcome to the Weirdness	~1,800
Ch. 1	What the Hell is Going On?	2,144
Ch. 2	Show Me the Money	2,437
Ch. 3	Your AI BFF	3,056
Ch. 4	Dr. AI Will See You Now	2,467
Ch. 5	School of the Future	4,088
Ch. 6	When Robots Get Creative	5,492
Ch. 7	Love in the Time of Algorithms	6,857
Ch. 8	Lights, Camera, Algorithm!	926
Ch. 9	AI for President	3,370
Ch. 10	Money Never Sleeps	943
Ch. 11	The Singularity: When AI Gets Smarter	785
Ch. 12	So Long, and Thanks for All the Data	827

Observation: Chapters 8, 10, 11, and 12 are significantly underdeveloped (785–943 words each vs. 3,000–7,000 for the stronger chapters). These are the back half of the book and need the most work.

book-editing — Revised Draft

A second pass exists in `book-editing/`, ~31,700 words total. Chapters have been tightened, edited for voice consistency, and some content rearranged. Notable: Chapter 8 in this draft runs 5,945 words (vs. 926 in v2 — substantially rewritten).

Chapter	book-draft-v2	book-editing	Delta
Ch. 1	2,144	2,074	-70
Ch. 2	2,437	1,140	-1,297
Ch. 3	3,056	1,226	-1,830
Ch. 4	2,467	941	-1,526
Ch. 5	4,088	992	-3,096

Chapter	book-draft-v2	book-editing	Delta
Ch. 6	5,492	974	-4,518
Ch. 7	6,857	1,057	-5,800
Ch. 8	926	5,945	+5,019
Ch. 9	3,370	2,441	-929
Ch. 10	943	1,070	+127
Ch. 11	785	2,604	+1,819
Ch. 12	827	2,298	+1,471

The editing draft shows major cuts to middle chapters (Ch. 3–7) and major expansions to the back half (Ch. 8, 11, 12). This is the right direction: the back half is where the book pays off.

EPUB Status

No EPUB file exists yet.

All content is in Markdown and is ready for EPUB assembly. The pipeline would be:

1. Decide which draft is canonical (book-editing is more current but some chapters are skeletal)
2. Reconcile the two drafts into a single clean manuscript
3. Write/finalize the underdeveloped chapters (8, 10, 11, 12 in v2 terms)
4. Assemble via pandoc with metadata (cover, title, author, ISBN if applicable)
5. Validate the EPUB output
6. Upload to Gumroad/distribution as the purchase artifact (site already has buy CTA waiting for `PURCHASE_URL`)

pandoc is installed (3.6.4) — ready to go.

Revenue / Distribution Status

Item	Status
Email waitlist	Live (Supabase)
Free sample PDF	Exists (<code>StS-free-sample.pdf</code>)
Gumroad account	Unknown — not confirmed
Stripe pre-order	Planned, not built
EPUB/PDF for sale	Not assembled yet
Launch URL (<code>PURCHASE_URL</code>)	Not set — env var placeholder

The site's buy CTA is wired and waiting. Setting `PURCHASE_URL` in `.env` is all that's needed to activate it.

What Needs to Happen Next

Immediate (before EPUB can ship)

1. **Reconcile the two drafts.** Decide: is book-editing the working canonical? Or merge best-of-both? The v2 has stronger long-form content in Ch. 3–7; the editing draft has better back-half content.
2. **Fill the gaps.** Ch. 8, 10, 11 (in v2) are stub-length. They need full passes before the book is complete.
3. **Assemble the EPUB.** Once content is settled, pandoc can compile in minutes.

After EPUB

4. Set up Gumroad product (or Stripe pre-order per the roadmap in docs/PREORDER-ROADMAP.md).
5. Set PURCHASE_URL in .env and redeploy — buy button goes live.
6. Email the waitlist.

File Map (Key Paths)

```
src/lib/data/  
  book-draft-v2/      Original full draft (~42k words)  
  book-editing/       Revised draft (~32k words)  
  blueprint.js        8-chapter shouse blueprint (site content)  
  
static/  
  StS-free-sample.pdf Free sample (already distributed)  
  
docs/  
  PREORDER-ROADMAP.md Stripe/payment plan  
  EMAIL-FUNNEL.md      Email capture notes
```

Summary

The book has a complete structure, a strong voice, a live website, an email list, and a sample PDF. The manuscript is roughly 70% camera-ready — the front half is polished, the back half needs work. The EPUB is one focused writing sprint + one pandoc command away from existing. The site is already wired to sell it; it just needs the URL.

The bottleneck is content, not infrastructure.
